Table VI.

Logistic regression was applied, with fracture as the dependent variable and age, gender and medicines as the independent variables.

	Exp(B)	95% CI fyrir Exp (B)	P
Ópíöt og beta blokker	2.217	2.053 - 2.398	<0.0005
Róandi lyf og beta blokker	1.653	1.565 – 1.745	<0.0005
PPI og beta blokker	1.575	1.486 – 1.667	<0.0005
H2-andhistamín og beta blokker	1.114	0.930 – 1.335	0.241

Exp(B) is interpreted as OR (Odds Ratio). Also included in the regression model were age and gender.
